

mysportia

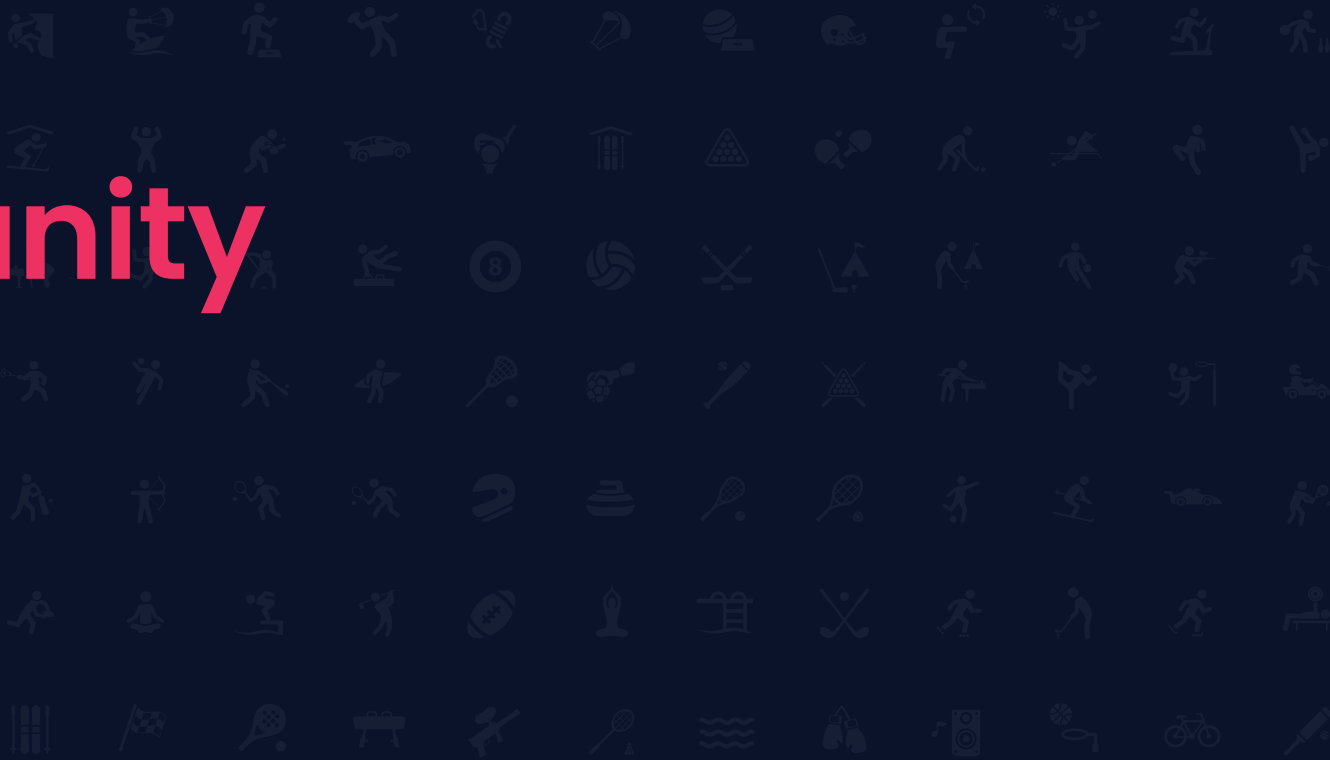

National sports and activity infrastructure
for **Thailand**

A product of Education AI Group Co., Ltd.
September 2026

ACT I — WHY THIS EXISTS

The opportunity

ACT I • THE OPPORTUNITY

The problem

75%

of Thai adults are highly sedentary, sitting more than seven hours a day

3 in 4

stop playing sport entirely after leaving education

The reason is not lack of interest. **It is lack of access.**

ACT I • THE OPPORTUNITY

Where it started

Sport is everywhere in education. Then it stops.

It once took over **two hours** of phone calls to organise a single game of paintball — a venue with no online booking, a group to coordinate, and no way to see whether anything was available.

A flight, a hotel or a car can be booked in **ninety seconds**.

One game of paintball

A flight, a hotel, a car

90 seconds

Sport is one of the last major consumer categories with no unified way in.

ACT I • THE OPPORTUNITY

Why access is hard

Fragmented

Venues run on phone calls, LINE chats, paper schedules and spreadsheets. Over 60% have no online booking system at all. There is no central place to discover or book anything.

No one to play with

Having someone at your level to play against is the single biggest predictor of whether a person keeps participating.

Minority sports are invisible

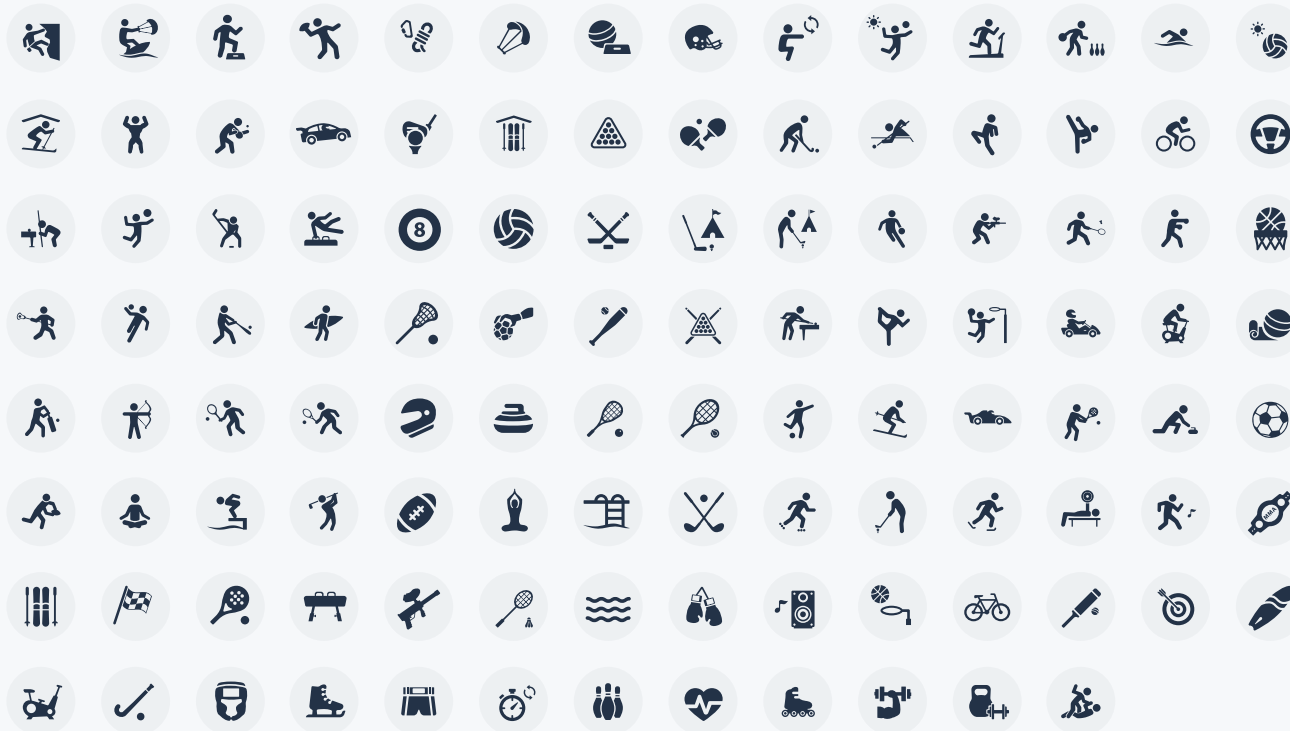

Climbing, diving, Muay Thai, archery, community leagues — happening across the country, with no way for the people who would play them to find them.

No visibility for the state

A largely cash sector means no participation data, no sector picture, and tax revenue that goes uncollected.

ACT I • THE OPPORTUNITY

Every sport — including the ones nobody builds for

Every sport. Every activity. One infrastructure.

Once the connective layer exists, the marginal cost of carrying one more sport is close to zero. The small sports get the same infrastructure as the big ones.

ACT I • THE OPPORTUNITY

What MySportia is

National infrastructure connecting people to the places where they can play — raising participation in sport and activity, including amateur and minority sports, by automating the business side so venues can concentrate on delivering the service.

ACT I · THE OPPORTUNITY

The architecture — two sides, one system

VENUE SIDE — THE ENGINE

Online booking and schedules · payments as a master merchant with Stripe and Omise (PromptPay, Thai QR, cards) · automatic invoices, receipts and VAT · customer database and marketing · memberships and packages · automated reminders · resource and staff management

CONSUMER SIDE — THE STOREFRONT

Find any sport by location, date or type · instant booking and payment · peer matchmaking by skill level · create a game, league or tournament · rankings, leaderboards and results · your bookings, passes and memberships in one account, under your control · vetted activities, in Thai and English

One system

Venue transactions generate the availability, schedules and results the consumer side draws from

The full planned scope — two sides, one system.

ACT II — WHAT EXISTS, AND WHAT COMES NEXT

The build

ACT II • THE BUILD

The order this had to be built in

The obvious thing to build first was the consumer marketplace. It could not be built.

The venues were the bottleneck. Notebooks, spreadsheets, phone calls, LINE messages. No real-time availability, no digital payments, no central system.

You cannot build a marketplace on top of businesses that are not bookable.

Hotels first got booking systems.
Only then did a booking marketplace become possible.

So the order was inverted, deliberately.

First fix the venues.
Then build the thing people actually use.

ACT II • THE BUILD

The three phases

PHASE 1

BUILT

Fix the venues

One system that runs the business: bookings, schedules, payments, invoices and VAT, memberships, customers, staff and resources. Make every venue instantly bookable.

PHASE 2

BOOKING LAYER BUILT

The marketplace

Aggregate the digitised venues. One place to find any sport by location, date or type, with real-time availability and instant booking, in Thai and English.

PHASE 3

THIS PROJECT

The lifestyle layer

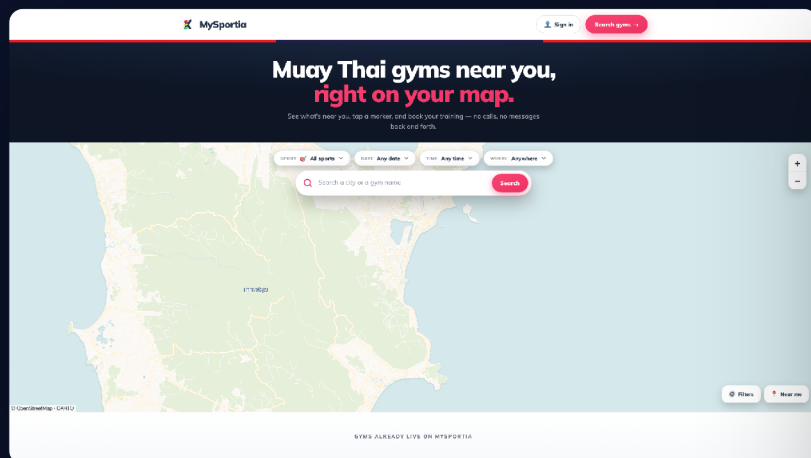

Profiles and skill ratings, opponent and partner matching, leagues, tournaments and national rankings, activity feed and community, native mobile applications.

Discovery → **Booking** → **Participation** → **Community** → **Progression**

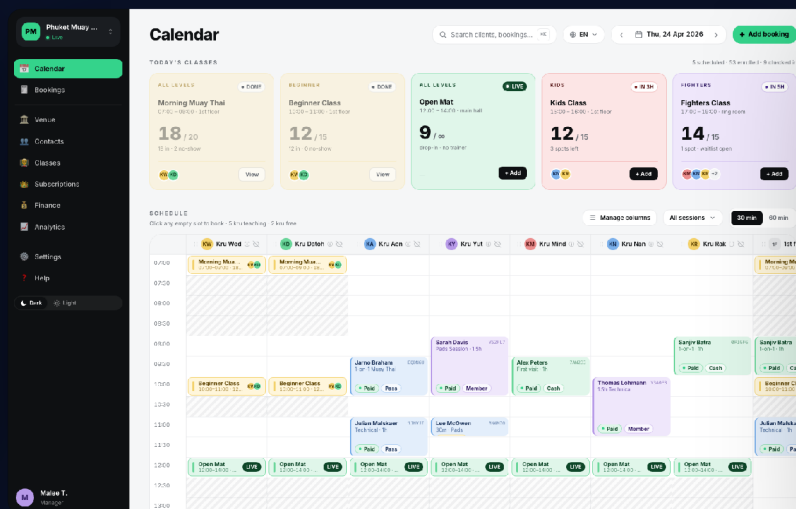

Phases 1 and 2 cover discovery and booking. Phase 3 is participation, community and progression — the half that determines whether a person is still playing in a year.

ACT II · THE BUILD

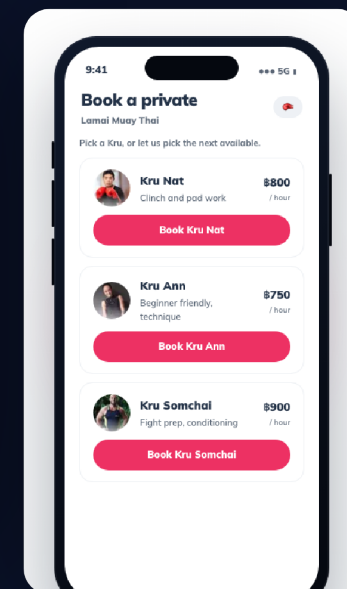

Built and running — live today

Marketplace listing and booking — live at mysportia.com

Venue management back office — bookings, scheduling, customer records, staff and reporting

Booking on a phone

Live at **32 pilot venues** in Thailand

Master merchant with Stripe and Omise — PromptPay, Thai QR, cards. Phase 1 and the booking layer of Phase 2: approximately 15% of the planned system.

ACT II • THE BUILD

What a venue gets

ACT II · THE BUILD

What a player gets

Everything in one place

Any sport, any venue, live availability — in Thai and English.

Booked and paid in seconds

PromptPay, Thai QR or card. Confirmed instantly.

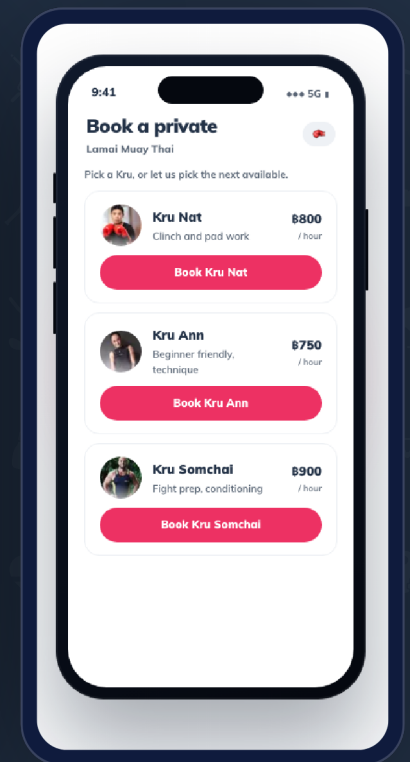

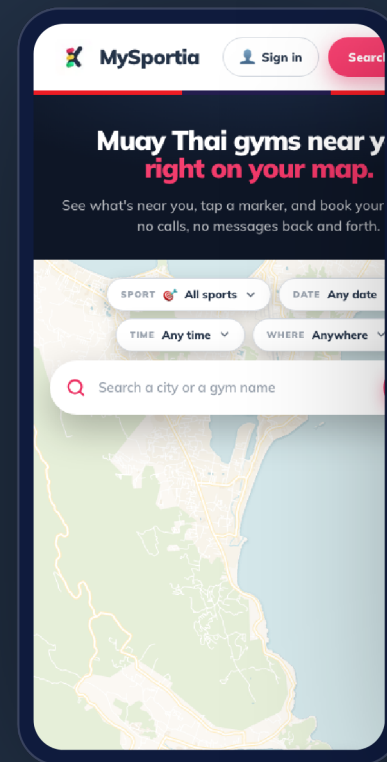

Control

Bookings, passes and memberships in one account, in their pocket — not on a paper card behind a counter.

Someone to play with — built under this project

Matched to an opponent at their level, with leagues and rankings to play for.

 **mysportia**

ACT II • THE BUILD

To be developed — approximately 85%

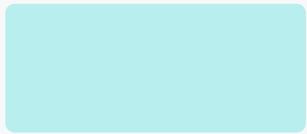

- 1 Player feed and consumer experience**
A personalised activity feed through which players discover venues, sessions and events near them, with social profiles and activity history.
- 2 Opponent matching**
Matching players to opponents and partners by sport, skill level, location and availability, so that a player without a group can still book and play.
- 3 Leagues, tournaments and rankings**
Creation and running of leagues and tournaments across venues, with fixtures, results, standings and a national ranking system by sport.
- 4 Automated tax reporting to the Revenue Department**
Automated preparation and submission of venue tax reporting directly from transaction records, bringing venues into the digital tax system without manual filing.
- 5 Venue hardware integration**
Device firmware, the hardware integration layer and the platform services that operate venue access gates, point-of-sale terminals, self-service kiosks and QR-based entry and validation.
- 6 Native mobile applications**
Separate native applications for players and for venue operators, on iOS and Android.
- 7 AI-assisted venue onboarding**
Automated extraction and structuring of a venue's services, schedule and pricing so that a venue can be brought onto the platform in hours rather than weeks.
- 8 Multi-tenant backend for national scale**
The platform architecture required to operate across thousands of venues nationally, with tenant isolation, regional data handling and operational monitoring.

None of these functions exists in the system today. All will be built in Thailand, by the company's Thai engineering team, over twelve months.

ACT II · THE BUILD

The 15 / 85 split

15% 85%

Built and running

Venue back office ·
marketplace booking ·
payments

This project

Eight new functions · twelve months · in Thailand

The first half is the plumbing. The second half is the product.

Completeness measured against full planned product scope.

ACT II • THE BUILD

Why the two halves are one system

Every venue that joins brings its existing members with it. They become users of the marketplace on day one — with no consumer advertising at all.

This is why the consumer side reaches national scale without national marketing spend — and why the two halves are one system rather than two products.

A venue joins

A venue joins

A venue joins

**Its members become
marketplace users on
day one**

No consumer advertising

ACT II • THE BUILD

One infrastructure. **Many industries.**

Nothing in the venue engine is sport-specific. Bookings, schedules, payments as a master merchant, memberships, customer records, automatic accounting and tax reporting — every service business in Thailand needs the same machine.

**MySportia**

Sports and activity venues

LIVE — 32 PILOT VENUES

**Kizzem**

Venue and service booking, any industry

BUILT

**PetFlow HQ**

Pet-care businesses

BUILT

Further verticals follow the same model.

This application funds the sports platform. The infrastructure it completes is the model for every vertical that follows — **built once, in Thailand.**

Q3

Q4

8 · Multi-tenant backend for national scale

1 · Player feed and consumer experience

7 · AI-assisted venue onboarding

5 · Venue hardware integration

6 · Native mobile applications

4 · Automated tax reporting to the Revenue Department

2 · Opponent matching

3 · Leagues, tournaments and rankings

Built in Thailand, at the Bangkok development office, by the company's Thai engineering team.

Quarters counted from approval. Numbers refer to the eight functions on slide 15.

ACT II • THE BUILD

Customers and revenue

CUSTOMERS

Sports and activity venues in Thailand — Muay Thai gyms, fitness centres, padel and tennis courts, swimming pools and multi-sport facilities. On the consumer side, players who discover and book those venues through the marketplace.

REVENUE

A tiered monthly software licence fee, invoiced to the venue. The fee is fixed within each band according to venue size, and is set independently of the venue's own revenue.

LICENCE BAND

THB / MONTH

Starter	1,000
Growth	2,000
Professional	5,000
Enterprise	from 10,000

The company also earns payment processing income from venues using its integrated payments. That income is ordinary non-promoted income, is fully disclosed, and is taxed normally.

ACT III — WHO WE ARE, AND WHAT THE COUNTRY GETS

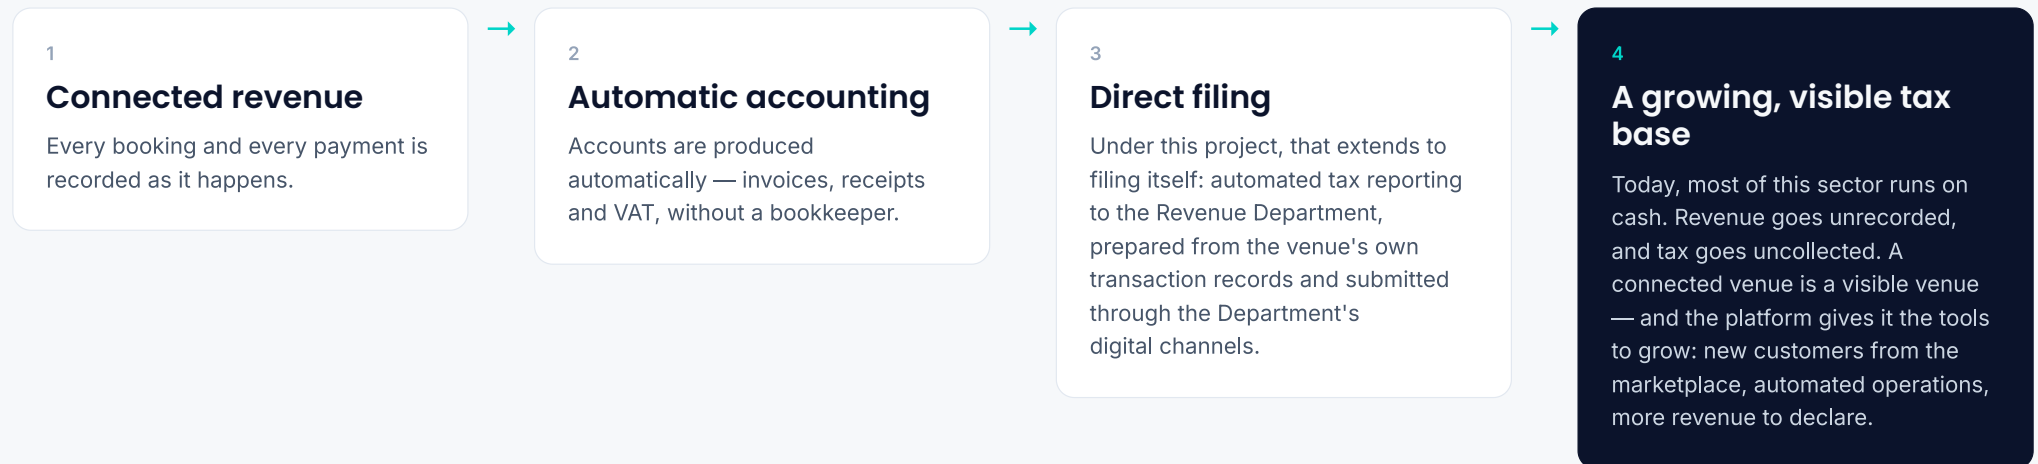

Thailand's **return**

ACT III · THAILAND'S RETURN

The Thailand dividend

When a venue runs on MySportia, its whole revenue runs through one system.

A bigger, cleaner tax base — **at no cost to the state.**

ACT III · THAILAND'S RETURN

The team

Education AI Group has no employees today. Every role on this slide is new employment created after approval.

Justin Cohen

Chief Executive Officer, authorised director

MSc Advanced Management, Leeds University. Founding and leading technology, product and consumer businesses since 2006, including hardware product development from design through manufacture.

Dmytro Bodlev

Chief Technology Officer

Platform architecture and delivery. Will build and lead the Thai engineering team in Bangkok.

TO BE RECRUITED AFTER APPROVAL — ROLES, NO NAMES

Chief Operating Officer

venue operations, customer support, service delivery, venue hardware deployment

Project Manager

delivery planning and coordination across engineering, design and testing

Head of Sales

national venue acquisition and the Thai agent network

THAI ENGINEERING TEAM

4 Year 1 **8** Year 2 **12** Year 3

Project management, systems analysis, development, design, testing.
Based at the Bangkok development office.
